## **Compressor Users International Forum 2008: Call for Papers now available**

Frankfurt, 6 November 2007 – The VDMA Compressors, Compressed Air and Vacuum Technology Association will organise the second Compressor Users International Forum from 28<sup>th</sup> to 29<sup>th</sup> October 2008 in the Congress Centre of Düsseldorf, Germany. The Compressor Users International Forum 2008 will be supported by the European Compressor Sector committee PNEUROP and its national member associations as well as user associations. Next year it will take place together with the ninth Pump Users International Forum, in its kind as the most important in Europe, and the sixth EFRC (European Forum for Reciprocating Compressors) Conference. With three forums consolidated, the “International Rotating Equipment Conference – Pumps and Compressors” will be launched.

Under the leading topic “Compressors and systems” the Forum will offer a brilliant platform,

- To describe solutions to unsolved problems of the users of compressors and compressed air systems,
- To demonstrate ideas for cost savings in the operation of compressors and compressed air and gas systems,

- To improve the communication between the compressor user and the compressor manufacturer on a neutral basis.
- To identify future trends and requirements.

These aims should be achieved by the approved accomplishment of lecture and discussion sections presenting technical papers, training seminars (one day before) and an accompanying technical exhibition.

Interested experts and decision makers out of the compressor application, compressor manufacturing, engineering and science are requested to submit proposals for technical papers according to the Call for Papers, which is now available. Closing date is 10<sup>th</sup> December 2007.

Afterwards the Programme Committee will evaluate all technical papers and the authors of the accepted applications of contributions are requested to write out their technical papers in detail. This procedure guarantees the usual high quality standards. The programme brochures will be available in May 2008.

The Call for Papers can be required at the VDMA Compressors, Compressed Air and Vacuum Technology Association. It can also be downloaded on the website [www.introequipcon.com](http://www.introequipcon.com).
